

Configuration: Refresh recirculation unit
Material: Type 304 stainless steel
Filters: Multistage filters in services tower

Mills & Reeve is one of the UK's leading full-service law firms with offices throughout the UK. Their office in Norwich now benefits from a Refresh recirculation unit from Britannia.

Refresh is a self contained kitchen ventilation system that allows a kitchen to be ventilated without the need for extensive ductwork running to atmosphere, or costly structural alterations.

The freestanding unit incorporates a services tower at one end which houses an integral fan unit and four additional filtration stages to remove grease and odours from the airstream.

The filtered air is then reintroduced to the kitchen through the integral supply air diffusers on the front face of the canopy.

Fire risk within the structure is reduced considerably as no greasy ductwork runs through the building.

As cooking fumes are not exhausted to atmosphere there is no danger of odours causing a potential nuisance to neighbouring properties.

Refresh is supplied with a comprehensive controls monitoring package that indicates when the easily replaced filter elements are due for change, making the system very easy to maintain for the end user.

Britannia provides free design advice and will prepare design details for your project, free of charge.

For a refreshing approach to kitchen ventilation.
